Acknowledgments

I would like to thank my parents, Mr. Ken and my mentors , who helped me with this project.

About me

Hi! My name is Prajot Singh, and I currently study at Lotus Valley. I enjoyed the internship at clever very much. I learnt a lot about neural networks and object recognition.

About app

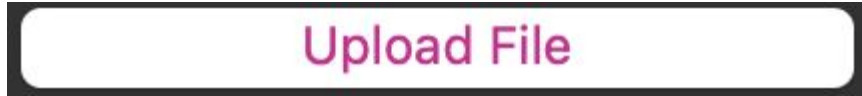

Main menu

- Upload button
- Submit button

The app which I have created is an object identifier. It allows the user to upload an image and detects the objects in that image. I chose this project as I always wanted to create something like the Google Lens on my own.

Upload button

Click on the upload button to upload a file. This will pop-up the file manager from where u can select a file.

Submit button

Click on the submit button to submit the selected file. This will detect the objects in the image.

Please upload a file before clicking the submit button.

Contact

Please contact me on my email which is prajotsingh200@gmail.com for any concerns/queries/suggestions.

Thank You
